

Name _____

Goldfish: What Do They Eat?

Short Answer Key

1. Being an omnivore allows goldfish to eat both plants and animals.
2. Goldfish forage for food by nibbling on algae or sucking up small plants and animals.
3. Examples include algae, insects, small crustaceans, or worms.
4. Pet owners can feed their goldfish treats like cooked peas or small pieces of vegetables.
5. Overfeeding can make the water dirty and harm the goldfish.
