

Name _____

Goldfish: From Egg to Adult

Short Answer Key

1. After they are laid, goldfish eggs stick to surfaces and hatch into fry in 2 to 7 days.
2. Fry hide among plants to stay safe from predators.
3. Fry eat tiny organisms like plankton or special food given by caretakers.
4. The juvenile stage is when goldfish look more like adults but are still small and growing quickly.
5. A goldfish's size depends on its living space, water quality, and diet.
