

Name _____

The Role of Gorillas in the Ecosystem

Short Answer Key

1. Gorillas help by spreading seeds through their diet of fruits.
2. It helps plants grow in new areas and keeps the forest diverse.
3. Gorillas prevent one plant species from taking over by eating plants.
4. If gorillas disappeared, seed dispersal would decrease, harming forest health.
5. Protecting gorillas helps keep the forest healthy for all species.
