

Name _____

How Do Gorillas Move?

Short Answer Key

1. Knuckle-walking is when gorillas walk using their knuckles for support because their arms are longer than their legs.
2. Gorillas avoid deep water because they are not natural swimmers.
3. Climbing helps gorillas gather food and avoid danger.
4. Their long arms help them balance while moving.
5. Young gorillas learn skills like climbing and balance through play.
