

Name _____

Do Gorillas Form Relationships with Other Species?

Short Answer Key

1. Mutualism means both species benefit from the relationship.
2. Gorillas spread seeds, helping plants grow in new places.
3. Parasitism affects gorillas by harming them through feeding on their blood or nutrients.
4. Birds benefit from stirred insects while gorillas remain unaffected.
5. Gorillas help keep the forest healthy by spreading seeds and creating food sources for other animals.
