## Exploring the Verdant Plains: Unveiling the Grassland Biome

### Multiple Choice Questions

1. What is the dominant vegetation in grassland biomes?

- a) Trees
- b) Shrubs
- c) Grasses
- d) Cacti

2. What role do wildfires play in grassland ecosystems?

- a) They maintain the balance of plant species.
- b) They prevent the germination of grasses.
- c) They promote the growth of trees.
- d) They have no impact on the ecosystem.

3. Which animal is commonly found in grassland biomes?

- a) Polar bear
- b) Bison
- c) Penguin
- d) Seal

4. What is the typical rainfall range in grassland biomes?

- a) 3000 to 4000 millimeters
- b) 1500 to 2000 millimeters
- c) 100 to 200 millimeters
- d) 500 to 900 millimeters

5. How have grasses adapted to fire in grassland ecosystems?

- a) They wilt and die.
- b) They promote tree growth.
- c) They rely on fire for germination.
- d) They become dormant.
