

Name _____

Sustainable Fashion: Dressing for a Greener Future

Short Answer Key

1. Upcycling involves taking old or discarded clothing items and transforming them into something new and fashionable. For instance, turning old jeans into a denim skirt or creating tote bags from old t-shirts are examples of upcycling in sustainable fashion.
2. Sustainable fashion promotes ethical production practices by ensuring fair wages and safe working conditions for garment workers. Brands that follow sustainable principles prioritize the well-being of their workers and support ethical labor standards.
3. Organic cotton is commonly used in sustainable fashion because it is grown without the use of synthetic pesticides and fertilizers. This reduces harm to the environment and promotes soil health.
4. Transparency in sustainable fashion builds trust with consumers. When brands openly share information about their production processes, materials, and labor practices, consumers can make informed choices and support ethical and environmentally friendly brands.
5. Second-hand shopping extends the life of clothing items, reducing the demand for new production. It prevents clothing from ending up in landfills and conserves resources that would have been used to produce new garments.
