## What Happens to the Oceans as Earth Gets Warmer?

### Short Answer Key

1. Warm ocean water gives energy to storms, making them stronger.
2. Coral bleaching is when coral turns white because the water is too warm.
3. Rising sea levels can flood homes and destroy habitats.
4. Acidic water weakens their shells and makes it hard for them to survive.
5. People can use clean energy and plant trees to help slow down climate change.
