

Name _____

Where Do Guppies Live?

Short Answer Key

1. Guppies live in rivers, streams, ponds, and lakes in the wild.
2. Guppies can't live in salty ocean water because their bodies are designed for freshwater.
3. Plants and rocks in their habitat give guppies places to hide and lay their babies.
4. Guppies are easy to care for because they can survive in a wide range of water temperatures.
5. Guppies eat mosquito larvae, which reduces the number of mosquitoes.
