

Name _____

What Do Guppies Eat?

Short Answer Key

1. Being omnivores means guppies eat both plants and animals.
2. Guppies eat algae and mosquito larvae in the wild.
3. Guppies help control mosquito populations by eating mosquito larvae.
4. Guppies in aquariums can eat fish flakes, vegetables like spinach or peas, and live or frozen foods like bloodworms.
5. Guppies find food by swimming around and nibbling at plants or small creatures in their environment.
