

Name _____

Guppy Survival: Facing Predators and Dangers

Short Answer Key

1. Two animals that eat guppies are frogs and birds.
2. Guppies protect themselves by hiding among plants and rocks.
3. When their habitat is polluted or destroyed, guppies may get sick or die.
4. Guppies can be affected by bacteria, fungi, and parasites in the wild.
5. Living in a school helps guppies because it makes it harder for predators to catch them and allows them to warn each other of danger.
