

Name _____

Penguin Habitat: Exploring the Relationship Between Penguins and Climate

Short Answer Key

1. The Galápagos penguin is found in the Galápagos Islands.
2. African penguins regulate their body temperature in warm climates by seeking shade.
3. Challenges that penguins in warmer climates face include heat stress and competition for resources.
4. Penguins in warmer climates cope with heat stress by altering breeding and foraging patterns.
5. Factors that can impact penguin populations regardless of the climate they inhabit include pollution and overfishing.
