

Name _____

Where Does a Capybara Live?

Open Ended Key

1. Capybaras are well-suited to living near water because their bodies are adapted for swimming, and water helps them escape predators and stay cool.
2. The warm and humid climate of South America provides the perfect conditions for capybaras to find food and water and stay comfortable.
3. Challenges include losing natural habitat, conflicts with farmers, and the risk of being hunted by humans.
4. A perfect home for a capybara would include a large water source, plenty of plants to eat, and enough space for a group to live together safely.
