

Name _____

Vanishing Homes: The Impact of Habitat Loss on Biodiversity

Multiple Choice Questions

1. What is habitat loss?
 - a) The destruction of natural habitats
 - b) The increase in the number of habitats
 - c) The preservation of ecosystems
 - d) The growth of wildlife populations

2. How does habitat loss affect species?
 - a) It provides more homes for them to live in
 - b) It increases the diversity of species
 - c) It has no impact on species
 - d) It reduces the availability of suitable habitats

3. What is one consequence of habitat fragmentation?
 - a) It enhances ecological processes like pollination
 - b) It makes it easier for species to move and find mates
 - c) It disrupts ecological processes and makes it harder for species to survive
 - d) It leads to the expansion of habitats

4. Which human activities often accompany habitat loss?
 - a) Conservation efforts
 - b) Deforestation, urbanization, agriculture, and mining
 - c) Habitat restoration projects
 - d) Wildlife protection initiatives

5. How does deforestation contribute to habitat loss?
 - a) By creating more habitats for species
 - b) By reducing carbon dioxide emissions
 - c) By destroying habitats and releasing carbon dioxide into the atmosphere
 - d) By preserving natural ecosystems
