

Name _____

Exploring the Habitats of Woody Plants

Short Answer Key

1. Oak trees and maples.
2. Succulent stems help woody plants conserve water in desert environments.
3. Woody plants in riparian habitats stabilize soil, prevent erosion, and provide habitat for aquatic species.
4. Woody plants in mountain habitats are resilient to cold temperatures and high winds.
5. Scattered trees or shrubs amidst vast expanses of grass characterize woody plants in grassland and savanna habitats.
