

Name _____

Do Hedgehogs Form Relationships with Other Species?

Short Answer Key

1. Solitary means an animal prefers to live and hunt alone.
2. Hedgehogs eating insects helps both the hedgehog and the garden.
3. Parasites can cause discomfort and spread diseases to hedgehogs.
4. Commensalism is when one species benefits while the other is unaffected, like crows eating insects disturbed by hedgehogs.
5. Hedgehogs don't form groups because they prefer to forage alone and avoid competition.
