## The Life Cycle of a Horse

### Open-Ended Response Answer Key

1. Foals need to walk soon after birth to stay safe from predators.
2. Proper care provides good food, clean water, and medical help, which can help horses live longer.
3. Humans help horses by providing food, shelter, and regular check-ups.
4. Horses grow quickly in the first few years because they need to become strong enough to survive on their own.
