

Name _____

How Do Houseflies Communicate?

Short Answer Key

1. Houseflies communicate by flying in patterns to signal food locations.
2. Houseflies leave a chemical trail on food, which other flies can detect using their antennae.
3. When a housefly senses danger, it flies away quickly, often followed by others.
4. Houseflies don't make sounds to communicate because they rely on movements, scents, and touch instead.
5. Houseflies interact by using touch and gathering in areas with food or warmth.
