

Name _____

Houseflies: Nature's Tiny Helpers

Short Answer Key

1. Houseflies feed on decaying matter, speeding up decomposition and recycling nutrients.
2. Birds and frogs are two animals that eat houseflies.
3. Houseflies carry pollen on their hairy bodies as they move between flowers.
4. Houseflies provide food for many predators, which helps balance the food chain.
5. Houseflies can spread diseases when they come into contact with food or humans.
