## Pathogen Pathways: How Germs Travel and Spread

### Multiple Choice Questions

1. How do pathogens spread through direct contact?
  - A) By coughing or sneezing
  - B) By touching contaminated surfaces
  - C) By sharing utensils
  - D) By shaking hands or kissing
  
2. What is one way pathogens spread through indirect contact?
  - A) By inhaling respiratory droplets
  - B) By consuming contaminated food or water
  - C) By touching contaminated surfaces
  - D) By receiving a mosquito bite
  
3. How do pathogens spread through airborne transmission?
  - A) By touching contaminated surfaces
  - B) By inhaling respiratory droplets
  - C) By consuming contaminated food or water
  - D) By sharing personal items
  
4. What is a vector-borne transmission?
  - A) Pathogens spread through the air
  - B) Pathogens spread through direct contact
  - C) Pathogens rely on vectors like mosquitoes or ticks to spread
  - D) Pathogens spread through contaminated food or water
  
5. How can pathogens spread through food and water?
  - A) By consuming contaminated food or water
  - B) By receiving a mosquito bite
  - C) By inhaling respiratory droplets
  - D) By touching contaminated surfaces
