

Name _____

How Intelligent is a Monkey?

Short Answer Key

1. Monkeys solve problems by using tools, like rocks to crack nuts or sticks to find insects.
2. Monkeys use tools like leaves to drink water, sticks to fish for termites, and rocks to smash nuts.
3. Grooming is important because it builds trust and strengthens relationships within the group.
4. An example of social learning is when a monkey watches another monkey use a rock to open a nut and then tries it themselves.
5. Memory helps monkeys recognize their group members, remember where to find food, and avoid predators.
