Name _____

Unlocking the Mystery: How Many Bones in the Human Body?

Short Answer

1. Name two examples of long bones in the human body and specify where they are located.

2. Explain why the fusion of certain bones, like the sacrum and coccyx, is important for mobility.

3. How does the skeleton protect vital organs?

4. Can you give an example of an irregular bone in the human body, and what makes it irregular?

5. Describe the role of sesamoid bones and provide an example.
