

Name _____

Koalas: The Tree-Hugging Marsupials

Open-Ended Response Answer Key

1. Koalas live alone because they need enough food in their own area and might not want to compete for leaves.
2. Losing trees harms koalas because it takes away their food and shelter, which can make it hard for them to survive.
3. If koalas could eat other foods, they might be able to live in more places and need less sleep.
4. To protect koalas, I would plant more trees, help rescue injured koalas, and educate people about keeping forests safe.
