

Name _____

Human Activities and Their Impact on Landforms

Short Answer

1. Explain how deforestation can lead to increased soil erosion and landslides.
2. Provide an example of a human-induced landform creation activity and describe its impact on the landscape.
3. Discuss the environmental challenges associated with urbanization and its impact on landforms.
4. Describe one sustainable practice that can help mitigate the negative impact of human activities on landforms.
5. Why is it crucial to consider the long-term consequences of climate change on landforms, even though it indirectly affects them?
