## Human Activities and Their Impact on Landforms

### Open-Ended Response Questions

1. Investigate a specific case study where human activities have significantly altered a natural landform or landscape. Describe the activities involved, their impact, and any efforts to mitigate the consequences.
2. Imagine you are an environmental scientist advising a city planning committee. Discuss the potential consequences of building a large dam in a valley and propose alternative strategies that could achieve the same goals with fewer environmental impacts.
3. Reflect on the ethical responsibilities of individuals and societies in preserving natural landforms. How can education and awareness contribute to more responsible land use practices?
4. Analyze the role of governmental policies and regulations in mitigating the impact of human activities on landforms. Provide examples of successful policies and their outcomes.
