## Do Jellyfish Form Relationships with Other Species?

### Multiple Choice Questions

1. What is an example of mutualism involving jellyfish?
  - a) A fish using the jellyfish for protection while cleaning it
  - b) A parasite feeding on the jellyfish's tissue
  - c) A jellyfish eating a small fish
  - d) A crab hitching a ride with a jellyfish
  
2. What do parasites do to jellyfish?
  - a) Help them find food
  - b) Protect them from predators
  - c) Feed on their tissues
  - d) Clean their tentacles
  
3. Which of these is an example of commensalism?
  - a) A sea turtle eating a jellyfish
  - b) A shrimp hiding on a jellyfish without harming it
  - c) Jellyfish controlling plankton populations
  - d) Fish cleaning jellyfish tentacles
  
4. Why do small fish swim among jellyfish tentacles?
  - a) To attack the jellyfish
  - b) To avoid predators
  - c) To eat the jellyfish
  - d) To ride on the jellyfish's back
  
5. What role do jellyfish play in the ocean food chain?
  - a) They are the top predators
  - b) They only protect small fish
  - c) They produce oxygen
  - d) They control plankton populations and serve as food for other species
