

Name _____

What's a Frog's Job? - Short Answer Keys

1. Birds, snakes, fish, or mammals like raccoons.
2. Frogs eat many insects, including mosquitoes and flies, which helps keep insect numbers down.
3. Because they can indicate changes in the environment, such as pollution or water quality issues, due to their sensitivity.
4. They play multiple roles, acting as both predator and prey, which supports various other animals in the food chain.
5. Frogs can live in places like tropical rainforests, deserts, and areas with both land and water, except Antarctica.
