

Name _____

What Does a Kangaroo Eat?

Short Answer Key

1. Herbivores only eat plants and do not eat meat.
2. Kangaroos eat grasses and leaves.
3. Their sharp front teeth help bite off grass, and flat back teeth help grind food.
4. Cud chewing is when food is partially digested, then chewed again to get more nutrients.
5. Kangaroos can survive in dry areas because they get water from the plants they eat.
