

Name _____

What Does a Kangaroo Eat?

Open-Ended Response Answer Key

1. Being a herbivore allows kangaroos to survive in plant-rich areas without hunting.
2. Like cows, kangaroos graze on grass and have a stomach that helps break down plants.
3. (Example) I would eat soft, green grass because it seems easy to chew and tasty.
4. If there were no plants, kangaroos would have no food or water and could not survive.
