

Name _____

How Does a Kangaroo Move?

Open-Ended Response Answer Key

1. Kangaroos evolved to hop because it helps them travel long distances in search of food and avoid predators.
2. The strong legs, balancing tail, and powerful muscles work together to help kangaroos hop efficiently.
3. Hopping would help me move quickly and see a lot of the area while staying safe from danger.
4. Humans can learn about conserving energy by observing how kangaroos move using minimal effort.
