

Name _____

What Does a Koi Eat?

Short Answer Key

1. Being omnivores means that koi fish eat both plants and animals.
2. Koi fish eat algae, duckweed, and soft fruits like watermelon or lettuce.
3. Koi fish swim up to the surface and quickly grab insects with their mouths.
4. Special pellets are full of nutrients and vitamins that help keep koi fish healthy.
5. A koi fish's sense of smell helps them find food in their environment.
