## What Does a Ladybug Eat?

### Short Answer Key

1. Aphids are tiny insects that suck plant juice, causing damage to leaves, stems, and flowers.
2. A single ladybug can eat up to 50 aphids in one day.
3. Ladybugs sometimes eat pollen or nectar when insects are scarce.
4. Ladybugs use their antennae to smell and detect the scent of pests nearby.
5. Ladybugs help farmers by eating pests that would otherwise harm crops.
