## Ladybugs: Tiny Creatures with Busy Lives

### Short Answer Key

1. Being diurnal means ladybugs are active during the day and rest at night.
2. Ladybugs rest under leaves, inside tree bark, or in rock cracks.
3. In winter, ladybugs hibernate in groups to stay warm and protected.
4. Ladybugs don't usually live in large groups because they can find food easily when it's warm.
5. Ladybugs use their antennae to touch and smell, helping them find food, mates, or other ladybugs.
