

Name _____

Ladybugs: Tiny Creatures with Busy Lives

Open-Ended Response Answer Key

1. Ladybugs are most active during the day because they need sunlight to stay warm and find their food, like aphids.
2. Hibernation helps ladybugs survive the winter by conserving energy and staying safe from predators in cold weather.
3. (Example response) I would want to study how ladybugs choose their resting spots or how they communicate during hibernation.
4. Ladybugs' peaceful nature helps them avoid fights and makes it easier for them to gather in groups for protection.
