

Name _____

The Life Cycle of a Rabbit

Short Answer Key

1. A mother rabbit uses her fur and soft materials like grass to build a nest for her kits.
2. Kits stop nursing and start eating solid food at 4 to 5 weeks old.
3. Juvenile rabbits are cautious because they need to avoid predators like foxes and hawks.
4. Adult rabbits survive in the wild by being fast and agile.
5. Wild rabbits usually live 1 to 2 years, while pet rabbits can live 8 to 12 years.
