## The Life Cycle of a Monkey

### Short Answer Key

1. Baby monkeys depend on their mothers for food, protection, and learning survival skills.
2. Juvenile monkeys learn skills by playing, climbing, and observing other monkeys.
3. As monkeys grow older, they eat solid food like fruits, leaves, and insects.
4. Adult monkeys care for younger monkeys, watch for predators, and contribute to their group.
5. Each stage helps monkeys learn, grow, and prepare for survival in the wild.
