

Name _____

The Life Cycle of an Otter

Short Answer Key

1. Otter pups are born blind, helpless, and rely on their mother for food and warmth.
2. The mother carries the pups to the water and helps them learn to paddle and swim.
3. Otters eat fish, crustaceans, and other small prey.
4. Otters reach adulthood at about one year of age.
5. The learning stage helps otters develop skills like swimming and hunting, which are essential for survival.
