

Name _____

The Life Cycle of a Koala

Open-Ended Response Answer Key

1. Koalas stay in eucalyptus trees because they provide food and protection from predators.
2. The life cycle helps koalas by keeping the joey safe and close to its mother until it is strong enough to live on its own.
3. Learning about koalas helps people understand their importance and the need to protect them.
4. As a wildlife protector, I would create safe zones for koalas and educate people about preserving their habitats.
