## Lifespan Mysteries: Exploring the Duration of Amphibian Lives

### Multiple Choice Questions

1. What factors can influence the lifespan of amphibians?
  - a) Species and habitat
  - b) Size and coloration
  - c) Gender and diet
  - d) Weather and geography
  
2. Which group of amphibians generally has longer lifespans compared to frogs and toads?
  - a) Frogs
  - b) Toads
  - c) Salamanders
  - d) Caecilians
  
3. What is one reason why some amphibians may have shorter lifespans?
  - a) Living in stable habitats
  - b) Limited availability of food
  - c) Cooler temperatures
  - d) Optimal environmental conditions
  
4. How do warmer temperatures affect the lifespan of amphibians?
  - a) They extend lifespan
  - b) They have no effect
  - c) They increase metabolism
  - d) They shorten lifespan
  
5. Why do some species of amphibians have longer lifespans than others?
  - a) Due to their size
  - b) Because of their diet
  - c) Depending on environmental conditions
  - d) Only because of genetic factors
