## Lifespan Mysteries: Exploring the Duration of Amphibian Lives

### Short Answer Key

1. Factors such as species and habitat can influence the lifespan of amphibians.
2. Salamanders generally have longer lifespans compared to frogs and toads.
3. Limited availability of food can be one reason why some amphibians may have shorter lifespans.
4. Warmer temperatures can shorten the lifespan of amphibians by increasing their metabolism.
5. Some species of amphibians have longer lifespans than others depending on environmental conditions.
