## What Does a Capybara Look Like?

### Short Answer Key

1. Capybaras' sharp teeth help them chew tough plants and bark.
2. They are good swimmers because they have webbed feet that help them move through water easily.
3. The placement of their eyes, ears, and nose allows them to see, hear, and breathe while most of their body is underwater.
4. Two predators that hunt capybaras are jaguars and caimans.
5. Capybaras are social animals because they live in groups and communicate with sounds like barks and whistles.
