Machine Learning Unraveled: Teaching Computers to Learn Like Humans

Open-Ended Response Questions

1. Discuss the potential ethical concerns associated with Machine Learning, especially in areas like privacy and bias. Provide examples and suggest how these concerns can be addressed.
2. Imagine a world without Machine Learning. How would it impact the way we interact with technology and the services we use in our daily lives?
3. Reflect on a personal experience where you have encountered a recommendation system powered by Machine Learning (e.g., product recommendations on an online store). How did it enhance or affect your experience, and do you think it was accurate in its suggestions?
4. In your own words, explain why Machine Learning is considered a groundbreaking technology and how it differs from traditional computer programming.
