

Name _____

Guardians of Health: Unveiling the Magic of Vaccines

Short Answer Key

1. Vaccines contain weakened or inactive parts of a virus, or even a whole virus that has been killed or modified.
2. The immune system responds to the weakened or inactive virus in a vaccine by producing antibodies.
3. The purpose of antibodies produced in response to a vaccine is to neutralize the virus.
4. Herd immunity works by protecting unvaccinated individuals within a community.
5. It is important for a community to achieve herd immunity to protect individuals with weakened immune systems and prevent the spread of diseases.
