## Marching Together

### Open-Ended Response Answer Key

1. Just like ants, humans work better when they help each other.  
For example, in a classroom, students can work together on a project to get better results.
2. I worked on a group project where we had to build a model bridge. By sharing ideas and dividing tasks, we finished successfully.
3. Ants share food and information because it helps their entire colony survive. If they only thought about themselves, the colony might fail.
4. If ants didn't work together, they wouldn't be able to find enough food, build strong homes, or protect themselves from danger.
