Name _____

Matter Matters: Exploring Solids, Liquids, and Gases

Short Answer

1. Give an example of a solid and describe its key characteristics.

2. Explain the properties of liquids and provide an example of a liquid in everyday life.

3. How do gases differ from solids and liquids in terms of their particle arrangement and behavior?

4. Describe what happens during a phase change and provide an example of a phase change you have observed.

5. Explain the concept of density and how it relates to the three states of matter.
