## What Does a Mosquito Look Like?

### Short Answer Key

1. A mosquito usually weighs less than 2.5 milligrams.
2. Most mosquitoes are gray or brown.
3. The mosquito's proboscis is used to pierce the skin and suck blood or nectar.
4. Mosquitoes have large compound eyes that allow them to see in multiple directions.
5. An Aedes mosquito can be recognized by the white stripes on its legs and body.
