

Name _____

Where Do Mosquitoes Live?

Open-Ended Response Answer Key

1. Mosquitoes can survive in many places because they adapt well to different environments and only need a small amount of water to reproduce.
2. (Example response) If there was no standing water, mosquitoes wouldn't be able to lay their eggs, and their population would decrease.
3. (Example response) It's surprising that mosquitoes can hibernate, but it shows how well they've adapted to survive.
4. (Example response) To create a mosquito-free zone, I would remove all standing water, use mosquito traps, and plant mosquito-repelling plants like citronella.
