

Name _____

The Amazing Life Cycle of a Mosquito

Short Answer Key

1. The four stages of a mosquito's life cycle are egg, larva, pupa, and adult.
2. Mosquito larvae need water to breathe and feed on tiny organisms.
3. During the pupa stage, the mosquito transforms into an adult inside the pupal shell.
4. Adult mosquitoes typically live for 1-2 weeks.
5. Mosquitoes provide food for animals like birds and bats, playing an important role in ecosystems.
