## The Amazing Looks of Moths

### Short Answer Key

1. Moths glide silently because their wings are covered in soft, tiny scales.
2. The Atlas moth and the luna moth are two examples with unique appearances.
3. Moths are lightweight due to their delicate body structure and thin wings.
4. Most moths are brown, gray, or white to help them blend in with tree bark, rocks, and leaves.
5. "Eye spots" on moths' wings scare predators by making the moth look like a bigger animal.
