

Name _____

The Amazing Looks of Moths

Open-Ended Response Answer Key

1. Moths' colors and patterns help them hide from predators, while features like "eye spots" can scare away enemies.
2. Moths can be tiny, like the pygmy moth with a 1/8-inch wingspan, or large, like the Atlas moth with a 12-inch wingspan.
3. Male moths need strong antennae to pick up the scent of female moths, even from far distances.
4. Answers will vary but might include features like "eye spots" or the variety of colors because they show how unique and creative nature can be.
